

Distron Corporation Improves Vital Electronic Manufacturing Services for Clients Around the World

While the capabilities afforded by the latest technology continue to open doors, and electronics of every variety get smaller, Attleboro Falls, Massachusetts based electronic manufacturer Distron Incorporated has continually kept pace with the rapid innovation that has come to characterize virtually every industry that relies on electronic equipment.

In years past, Distron Corporation increased both capacity and capability, investing over one million dollars to enhance the company's ability to provide electronic manufacturing faster and more efficiently – effectively meeting the needs of an even greater variety of clients.

The company has also made valuable additions to its team of employees in the form of vital personnel with 30 years of experience in project management. According to Don Petry, Vice President of Sales and Marketing, “These equipment and personnel acquisitions are one reason we've had the outstanding opportunity to stay strong and *continue* moving forward, despite the challenges posed by the economy.” Petry explains, critical additions to Distron Corporation include “a 12,500 square foot addition, a new SMT assembly work center, and expanded electro-mechanical work center, and more. Our 2nd fully automated SMT production line should be coming online in September, 2011 with semi-automatic screen printers, placement equipment, RoHS reflow ovens, an AOI machine, and a new aqueous cleaner.”

Petry explains, “There are a number of factors that we believe have helped us maintain our trajectory over the years. That includes achieving our ISO 13485 Medical Device Certification and International Traffic in Arms (ITAR) registration, as well as making numerous equipment upgrades.” Petry continues, “With customers across the country looking for high quality and cost efficient electronic manufacturing services, we believe its all of these factors combined that have helped us continue to deliver what they're looking for successfully.

Distron serves a wide range of industries with electronic manufacturing services, including the clean tech, lighting, medical, and electronics industries as well as the military.

About Distron Corporation

Distron Corporation, located in Attleboro Falls, MA is a New England based provider of electronic manufacturing services with 36 years of experience servicing small to medium size companies.
